DHANVI BHAT

Software Developer | Flutter | Java Spring Boot

Mangalore, India | +91 7349754356 | dhanvigbhat@gmail.com | linkedin.com/in/bhatdhanvi | github.com/bhatdhanvi

PROFESSIONAL SUMMARY

Software Developer with 1+ year of experience building production mobile and backend systems with Flutter, Java, Spring Boot, and PostgreSQL. Delivered RTP and ACH payment features, re-architected a Multi-Factor Authentication (MFA) module using Clean Architecture and BLoC/Cubit, and automated 500+ test cases to cut regression time by 75%. Experienced in AI-assisted, spec-driven development (BMAD, GSD, SpecKit, GitHub Copilot).

TECHNICAL SKILLS

Languages: Java, Dart, TypeScript, JavaScript, Python, SQL, HTML, CSS

Mobile: Flutter, BLoC, Cubit, State Management, Responsive UI, REST API Integration, JSON

Backend & Databases: Spring Boot 3, Spring Security, Spring Data JPA, Hibernate, Microservices, RESTful APIs, JWT, Keycloak, Liquibase, PostgreSQL

Testing: JUnit, Appium, Appium Flutter Driver, WebdriverIO, Test Automation, Regression Testing

AI & Spec-Driven Development: GitHub Copilot, BMAD, GSD, SpecKit, Prompt Engineering, Agentic Workflows

Tools & Practices: Git, GitHub, Docker, Maven, Postman, CI/CD, Clean Architecture, SOLID Principles, Agile/Scrum

PROFESSIONAL EXPERIENCE

Software Developer | Bottomline Technologies | Jul 2025 – Present

- Developed Real-Time Payments (RTP) and ACH payment features for an enterprise Flutter payments application, applying Clean Architecture, SOLID principles, and BLoC/Cubit state management to keep modules testable, scalable, and maintainable.
- Re-architected the Multi-Factor Authentication (MFA) module, consolidating approximately 10 MFA implementations into a modular, extensible design that simplified adding and maintaining authentication methods.
- Automated 7 core features (500+ test cases) using Appium Flutter Driver and WebdriverIO, increasing test automation coverage to over 50% and reducing regression testing time by 75%.
- Contributed to an In-House App Distribution Platform built with the BMAD spec-driven methodology, developing Java Spring Boot microservices for authentication, app catalog, release management, and artifact storage, plus a React Native client for secure installation of internal builds.
- Resolved production and pre-release defects across the mobile codebase and automated repetitive manual workflows, improving reliability and reducing team turnaround time in an Agile, spec-driven (SDD) process.

PROJECTS

Signature Classification using Deep Learning | *Python, Transfer Learning, Xception, VGG16* | Mar 2023 – Jun 2023

- Built a deep learning model to identify the writer of a signature using transfer learning, achieving 99% accuracy with Xception and 97% with VGG16.

IoT Water Quality Monitoring System | *ESP32, C, Arduino IDE, ThingSpeak* | Sep 2023 – Dec 2023

- Designed a real-time monitoring system integrating DS18B20, DHT11, turbidity, and TDS sensors with an ESP32 microcontroller, streaming data to ThingSpeak for remote analysis.

Movie Ticket Booking System | *SQL, HTML, CSS, JavaScript* | Nov 2023 – Dec 2023

- Built a web-based ticket booking platform with real-time seat availability, database-backed bookings, and user account management.

EDUCATION

B.Tech in Computer Science and Engineering | Dayananda Sagar University | CGPA: 8.57/10 | Jan 2021 – Jul 2025

Pre-University (Science), Class XII | Alva's Pre-University College | 91.5% | Jun 2020 – Mar 2021

CERTIFICATIONS

- Japanese Language Proficiency Test (JLPT) N5 | Introduction to Generative AI (Coursera) | Crash Course on Python (Coursera)
- Java Programming (Great Learning) | Face Recognition in OpenCV (Great Learning) | Python Basic (HackerRank)

ACHIEVEMENTS

- Letter of Appreciation for demonstrating IoT projects at the "From Concepts to Reality: Connecting the Dots" workshop, Malnad College of Engineering.
- Selected at college level for the Smart India Hackathon (SIH); selected for the Q-Karyashala Workshop at IISc, Bangalore.
